

## **New economy workshop fluids range is The Works**

**Stevens Industrial Services has launched TW – a range of economy workshop fluids, stemming from its successful range, The Works. These industrial cleaning and maintenance fluids are unique in their market as they all use compressed air aerosols, have all positional 360° valves and come with a choice of two nozzles.**

The cost-effective TW range consists of seven high performance products: a tapping and cutting oil (TW-C); a tube bending, deep drawing and deforming agent (TW BDF); a penetrating oil (TW-PEN); a multipurpose oil and moisture repellent (TW-Forte); and three heavy duty cleaners (TW SOLV, TW GLUE-SOLV and TW-CLEAN). All products are available in various quantities, including bulk containers of five and twenty five litres.

**TW-C** cutting and tapping is a market breakthrough because it is water washable and does not interfere with paintwork. This high performance fluid is suitable for all materials and attains an extremely clean cut.

**TW BDF** is also water washable and is extremely effective for tube bending, deep drawing and deforming.

The industrial-grade oil, **TW-PEN**, penetrates and loosens badly rusted and seized components. This impressive oil cleans, lubricates and protects.

**TW-FORTE** is a powerful multi-purpose oil and moisture repellent. This product is suitable for use in the workshop, the office, around the house and on vehicles.

The three cleaning products within the TW range achieve outstanding results. **TW SOLV**, a fast evaporating solvent cleaner removes greases, oils, fats, wax and even permanent marker from hard surfaces. **TW GLUE-SOLV** is a safe solvent cleaner, which removes most glues and sticky residues, even chewing gum. The emulsifier, **TW-CLEAN'** cleans virtually anything organic in the workshop.
