

Why The Works works

Graham Stevens managing director of Stevens Industrial Services explains why the The Works is different from other spatter control products

THE WORKS range of weld spatter control products caters for all the needs of the health and safety conscious welder. Products within this range make welding more productive and improve end results. Welding becomes easier, cleaner and tidier. THE WORKS products are also free of the health-damaging chemical, dichloromethane, making them completely safe to use.

As specialists in weld spatter control, SIS has recognised the need for dichloromethane free products as this dangerous, carcinogenic chemical has been proven to cause damage to the blood and the nervous system. Its possible long-term effects include liver damage and cancer. Dichloromethane is harmful if inhaled, swallowed or allowed to come into contact with the skin. SIS products do not contain this and environmental consciousness also extends to its packaging. Products within THE WORKS range use non-polluting compressed air.

The flagship of THE WORKS range is Pre-weld. This is the most effective anti-spatter on the market. Pre-Weld vastly outlasts aerosols and gives a better spray consistency. CleanWeld, the lower concentrated sister of Pre-Weld, is ideal for less heavy-duty applications, while TW Anti-Spatter, the economy version, provides a low cost alternative. White Spatter Shield Dip, Weld Nozzle Protector Spray, Jig and Tool

Protector constitute just some of the other products within the range that makes welding quicker, better, more efficient and safer.
